# SAC's 'Fail Safe' Keeps False Alarms From Turning Into War dent of the United States has authorized your attack. This is

FRANK H. BARTHOLOMEW President, United Press (Copyright 1958, by United Press.) OFFUTT AIR FORCE BASE,

**CPYRGHT** 

**CPYRGHT** 

Nebr., April 9-Imagine that you are commander of a B-52 jet bomber of the United States Strategic Air Command. You are in flight toward an enemy target. You are carrying thermo-nuclear bombs, capable of more destructive force than the combined American and British Air Forces delivered in all of World War'II.

This is not practice. Eight minutes ago you were dispatched from base. You are bound northward across the Fole, flying faster than the speed of sound.

Fourteen minutes ago your base, and every other SAC base in the world, received a flash from the Dewline (Distant early warning) network across Northern Canada that the radar scopes indicated a convergence of foreign objects flying swiftly toward the United States.

The foreign objects are too fast to be aircraft. Is this a flight of intercontinental missiles with atomic warheads hound for the citles of the United States and Canada?

## 15-Minute Warning.

Flight-time for missiles from Eastern Europe to North America is 30 minutes. The Dew-line gave your base 15 minutes ica is 30 minutes. warning. Your arieraft was the last of the sortie off the runway; you were airborne in six minutes; you have been flying for eight minutes; enemy inissiles which must have passed you in flight would be due to strike North America in one mrude Other United States bombers are in the air all over the world with reprisal bombs.

But this is one thing that you alone do not know: Since your takeoff, the foreign objects picked up on the radar scopes turned out to be a shower of meteorités.

Other aircraft in your sortie . have been turned back by radio, but in spite of the triggerquick efficiency of the comand of the plant aircraft under you hand, there has been a failure.

Someone has said that battle is a recies of errors and victory gott to the side that makes the towest number. The error in which you find yourself is that we did not receive a turn-back stinal.

the button and does the first out blindfolded. atomic bomb go "down the chminey" to start World War "down the III? All this because one of SAC's vast fleet of bombers failed to receive a transfer of prevent The all of courses. failed to receive a turn-back order?

"Fail Safe" semply instructs you to proceed toward your

nautical miles and then turn, back-"Fail Safe"-if for any reason you do not at that point and at that moment receive coded orders to continue to your target.

## Happens Many Times.

This actually has happened many times. The great counteroffensive striking force of the SAC has been sped on its way by alerts created by meteoric flights registering on the dewline radar scopes, or by inter-ference of high frequency transmitters creating artificial "blips," or by the appearance of foreign objects on the scope flying in seeming formation, which simply never have been explained.

The compression of time in the atomic age is such that SAC must be in constantly alert status and ready for instantaneous counter-attack," says Gen. Thomas S., Power, SAC's commander-in-chief.

Time does not permit holding bombing aireraft on the ground while alarms are investigated. The investigations take place while the bombers are on their way toward the target.

The Air Force planners be-lieve that if World War III occurs, the atomic exchange phase will all be over in the first four hours.

### 'An Order to Continue.

But you are at the controls of the B-52 again, your of the B-52 again, your radio is functioning you have reached the "Tall Safe" line. This time, instead of as order to return or no orders at all, a rasping voice in years car-

Let a colonel at the Strategic Air Command here picture the
